# Realyt's Solution Set

2021

As the “new normal” way of working starts to take hold, where there is an increased focus on process automation & efficiency, digitization and the value of data, Realyt provides a suite of solutions to meet these objectives.

*Our focus is on replacing those old fashioned, inefficient, customer unfriendly, and ecologically damaging, paper-based systems, with digital forms, digital signatures and digital contracts.*

## RealContract

Globally recognized as one of the most functionally rich, customizable contract lifecycle management applications available in the market.

If you want to streamline your procurement function, provide information for strategic procurement initiatives, make contracting for goods and services really easy, and deliver value back to the organisation, RealContract can provide the automated tools to achieve genuine, measurable improvements.

If you want to automate and digitize your customer facing contracts, from basic high volume contracts, to complex hierarchal SLA based customer services agreements, RealContract makes the process of creating and managing these agreements simple and efficient.

## RealytSignatures

For an enterprise grade digital signature solution, RealytSignatures is available as an integrated product into RealContract, as well as a stand-alone solution which can be integrated into your existing systems. We use two-factor authentication to ensure the necessary compliance and security to ensure your agreements and documents are validly signed and enforceable. Any document type or format can receive a RealytSignature and we can add digital certificates for further levels of security & non-repudiation.

## RealDocs

Presently utilised within RealContract and scheduled for release as a stand-alone solution in the second half of 2021, RealDocs digitises any form or document, to enable organisations to move away from paper based processes. Any conceivable type of form can be modelled and integrated into the contracting process, or stand alone within RealContract. Examples could be application forms, suppliers or customers applications, HR forms, purchase orders, delivery notes, etc.

With enterprise grade functionality and integration, coupled with RealytSignatures, approval workflow, data storage and reporting, any form-based process can be automated and digitised.

## RealAnalytics

For organisations that have used paper-based contracts and processes, the landscape can be a mess of unstructured data. RealAnalytics uses sophisticated data analytics software to turn disparate data into a picture of the contracting environment. This picture can set the benchmarks and metrics for improvement, measured over time to ensure project ROI is maintained.

# Realyst's Solution Set

2021

## Solution & Implementation Options

Realyst acknowledges that enterprise grade solutions need to offer both on premise, behind the firewall integrated solutions, as well as cloud-based consumption models. If you are a large regulated organisation in the financial services industry for example, or a smaller business looking to go digital, Realyst has a solution for you.

With our solution set you can tackle contract lifecycle management across the enterprise; procurement, customer facing, corporate agreements, operational delivery of SLAs, or chose to automate only one contract type and the associated processes involved.

We have experience in a wide variety of Industries and have been involved in digitising contracts for over two decades, so you get unparalleled best practice, sustainable process advice and knowledge along with the software to make implementations and adoption easy and least disruptive.

*With our integrated approach to forms, signatures and contracts, flexible customisation and enterprise grade functionality, any organisation can move from paper to digital with confidence.*
