

Signatures that fit your workflow.

RealSign brings legally binding electronic signatures directly into your applications and business processes, eliminating unnecessary friction while maintaining security, compliance and complete auditability.

Legally recognised
electronic signatures you can rely on.

1M+
Documents signed with RealSign.

COMPLETE TRUST
Tamper-evident records and full audit trails.

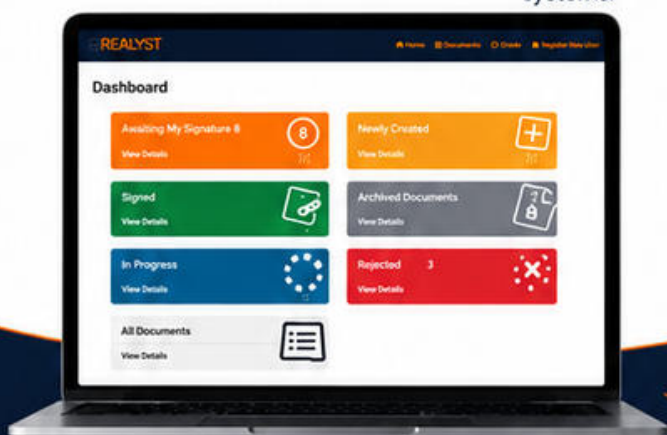

FASTER PROCESSES
Reduce turnaround time and keep work moving.

STRONGER CONTROL
Maintain visibility, security and compliance.

EASY TO INTEGRATE
API-first architecture that fits your existing systems.

How it works

1
A user initiates the signing process

2
The document is configured for signing

3
Two factor authentication is initiated

4
The document is securely and easily signed

5
All signed documents are securely stored for future retrieval

Secure. Compliant. Seamless.

RealSign is embedded where work happens—so your business stays secure, compliant and always in motion.

Secure by design

Enterprise-grade security, encryption and authentication built in.

Fully Compliant

Meets local and global regulatory requirements with complete audit trails.

Easy to Deploy

Cloud or on-premise options to suit your organisation.

Better Experience

Streamlines signing experiences that users will actually enjoy.

Always available

Secure, reliable and accessible when you need it.

The Signature isn't the problem.

The disruption is.

Traditional signing processes pull users out of their flow and into a disconnected experience:

Slower approvals

More steps mean more delays and longer turnaround times.

Higher risk

Manual handoffs increase errors and reduce visibility.

Poor experience

Context switching frustrates users and leads to drop-offs.

More admin work

Chasing signatures, downloading and re-uploading documents waste time and money.

Friction in the signing process directly impacts your speed, costs and customer experience.

THE TRADITIONAL WAY

Disconnected. Manual. Slow.

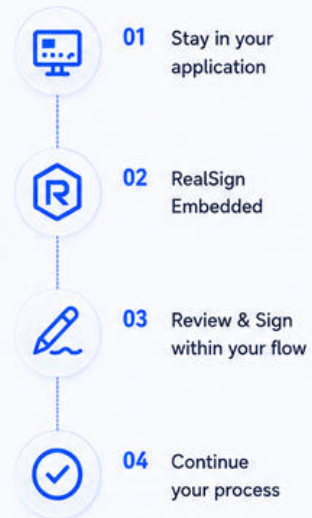

Multiple disconnects.
Unnecessary delays.
Lost productivity.

THE MODERN WAY

Connected. Seamless. Fast.

No redirects.
No disruption.
Just results.

The impact of a broken signing experience

2-4x

LONGER CYCLES

Approvals take longer when users leave their workflow.

Up to 30%

MORE COSTS

Manual work and delays drive up operational costs.

25-40%

LOWER COMPLETION

Users abandon processes when the experience is too complicated.

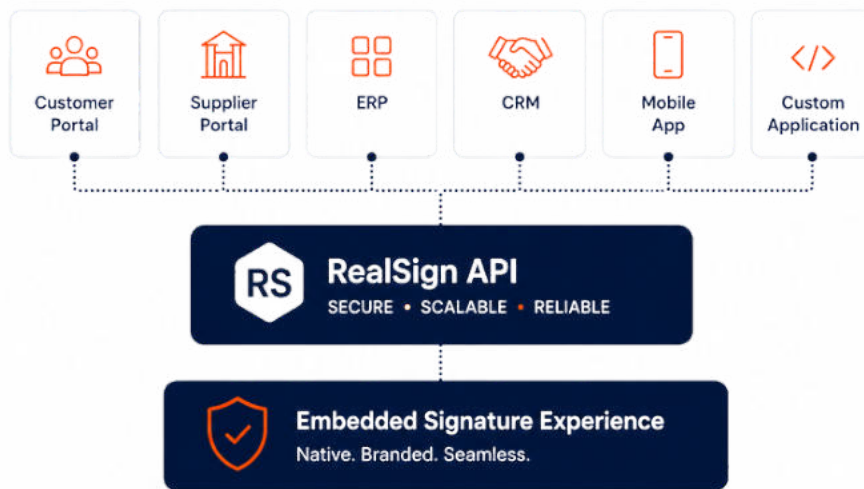

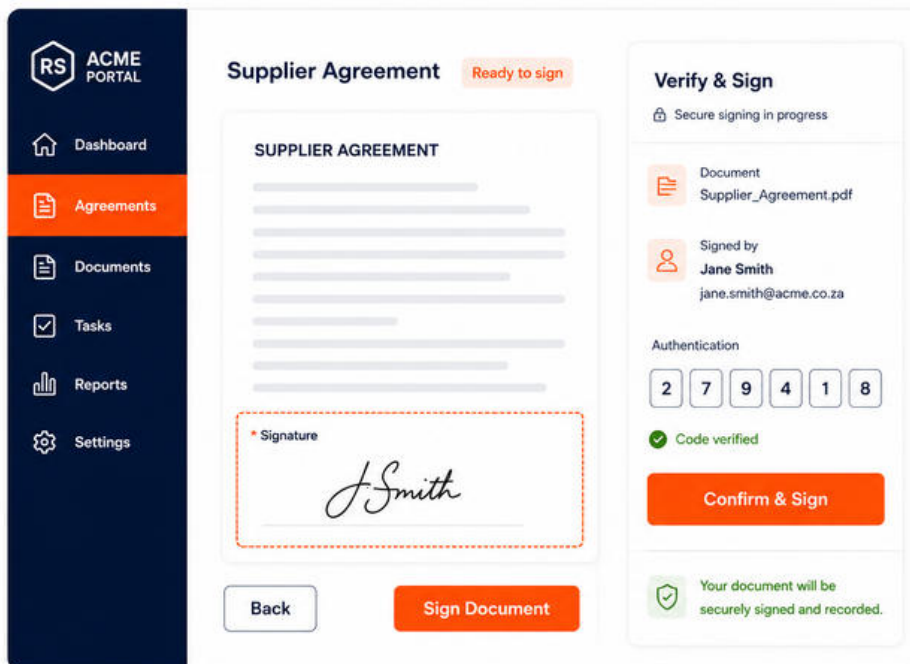

Less Visibility INTO PROGRESS

Harder to track, chase and manage document status.

Built for **embedded** experiences.

Keep users where the work happens. RealSign integrates directly into your applications and business processes, enabling users to review and sign documents without leaving the environment they are already using. Deliver a seamless, secure and on-brand signing experience that feels native to your solution.

EMBED SIGNING **ANYWHERE** IN YOUR ECOSYSTEM

The screenshot shows the RealSign interface integrated into an 'ACME PORTAL'. The left sidebar contains navigation links: Dashboard, Agreements (highlighted), Documents, Tasks, Reports, and Settings. The main content area is titled 'Supplier Agreement' and includes a 'Ready to sign' status. Below the title is a 'SUPPLIER AGREEMENT' document preview. A signature box shows a handwritten signature 'J. Smith'. At the bottom are 'Back' and 'Sign Document' buttons. To the right, a 'Verify & Sign' section shows 'Secure signing in progress', the document 'Supplier_Agreement.pdf', and the user 'Jane Smith' (jane.smith@acme.co.za). An authentication code '279418' is displayed, followed by a 'Code verified' status and a 'Confirm & Sign' button. A final message states 'Your document will be securely signed and recorded.'

-  **Native experience**
No redirects. No context switching. Just seamless signing.
-  **Your brand, your users**
Fully white-labelled to match your look, feel and user experience.
-  **Your security**
Leverage your authentication and permissions model.
-  **Better outcomes**
Faster approvals, fewer errors and happier users.

RealSign works with your business processes, not the other way around.

Because the best signing experience is the one your users never have to leave.

One Platform, 3 Ways to Deploy

Every organisation is different. That's why RealSign is available in three flexible deployment options - so you can choose the model that fits your needs, your resources and your roadmap.

Same powerful platform.
Same security.
Same compliance.

The deployment that works for you.

RECOMMENDED 		
RealSign Embedded API	RealSign Enterprise	RealSign Hub
For software vendors and organisations building their own applications.	For organisations requiring customised signing workflows and enterprise deployment.	For teams that want to get started quickly without development.
 Fully embedded signing Signatures inside your application and workflows.	 Hosted or on-premise Deploy in the environment that meets your requirements.	 Cloud hosted Secure, reliable and always up to date.
 White-labelled experience Your brand. Your users. Your look and feel.	 Integration Design and automate complex approval and signing processes.	 Rapid deployment Get up and running in days, not months.
 API-first architecture RESTful APIs and SDKs make integration fast and flexible.	 Branding & configuration Tailor the platform to your brand and business needs.	 Simple onboarding Easy sign up and straightforward configuration.
 Native user experience No redirects. No context switching. Just seamless signing.	 Training & enablement Comprehensive training to get your teams up to speed.	 No development required Use out of the box with powerful standard features.
 Maximum flexibility Build custom workflows and experiences without limits.	 Priority support Dedicated support for mission-critical environments.	 Secure & compliant Built on Azure with enterprise-level security.
 Built for innovation. Designed for developers.	 Enterprise-grade control. Built for scale.	 Fast to start. Easy to scale.

 Find the right fit for your business	 Choose Embedded API if you:	 Choose Enterprise if you:	 Choose Hub if you:
	- Build software or platforms - Need complete flexibility - Want signing inside your app	- Integration - Need advanced configuration - Require on-premise deployment	- Want to launch quickly - Don't require development - Need a ready-to-use solution

Different deployment. Same promise:
Faster execution. Better experiences. Complete trust.

Whichever option you choose,
you're backed by the power of RealSign.

Built for speed, Designed for trust.

RealSign combines a powerful set of capabilities with an easy-to-use experience, giving you everything you need to get agreements signed faster, with confidence.

Embedded Signing Experience

Sign documents without leaving your application. No redirects. No friction. Just seamless experiences.

Legally Binding Electronic Signatures

Compliant electronic signatures you can rely on for your most important agreements.

Internal & External Signatories

Invite anyone to sign—employees, partners, customers or suppliers. Secure and simple.

Two-Factor Authentication (OTP)

Verify every signer with email and OTP to ensure the right people sign every time.

Complete Audit Trail

Every action is captured with date, time, IP address, and more—providing a full, tamper-evident audit trail.

Workflow Management

Create flexible approval flows, set signing orders and keep everyone on track.

Custom Notifications & Escalations

Keep signers informed with automated emails and reminders that reduce delays.

Real-time Dashboards & Reporting

Track signing progress, measure performance and gain visibility across your entire organisation.

Azure Key Vault Security

Encrypt and protect sensitive data with industry-leading security and key management.

White-labelling & Branding

Deliver a consistent brand experience with your logo, colours and custom domains.

API-First Architecture

RESTful APIs and SDKs make integration fast, flexible and built for developers.

Cloud or Enterprise Deployment

Run in the cloud on Azure or deploy on-premise—you choose what works best for you.

Everything you need to get agreements signed—faster.

Shorter cycle times

Lower operational costs

Better user experiences

Stronger control and compliance

Security built in, Confidence by Design.

Every signing event is protected by multiple layers of security, authentication and auditability - giving your organisation confidence that every agreement is secure, verifiable and compliant.

Encryption & Security

All data is encrypted in transit and at rest using industry-standard protocols. Encryption keys are managed securely in Azure Key Vault. Network and access controls protect your environment.

Two-Factor Authentication

Users are verified using email and one-time password (OTP) before signing. This ensures the right people sign the right documents—every time.

Complete Audit Trail

Every action is recorded, including who, what, when, where and how. A full, time-stamped audit trail is available for every signed document.

Tamper-Evident Protection

Documents and signing records are protected using trusted certificate technology and cryptographic hashing to detect any tampering. Long-term validation ensures signatures remain verifiable.

Compliance & Governance

RealSign supports POPIA, GDPR and eIDAS requirements. We use trusted certificate authorities (AATL) and follow internationally recognised standards.

Azure-Powered Security

Hosted in Microsoft Azure with enterprise-grade controls including Azure Security Centre, Defender, monitoring and regular security updates to keep your data safe.

Every Signing Event. Fully Protected.

User Initiates

The signing process is started.

Authenticate

Email and OTP verification.

Review Document

Document is presented within your workflow.

Document Signed

Intent captured with digital signature.

Timestamped

Date and time recorded with accuracy.

IP Address Logged

Location and device information captured.

Audit Trail Recorded

All events written to an immutable audit log.

Tamper Protection Applied

Record secured using cryptographic hashing and stored securely.

**Your data.
Your trust.
Our responsibility.**

Always Available

Highly available infrastructure with redundancy and disaster recovery.

Backups & Recovery

Daily encrypted backups with offsite replication and rapid point-in-time restoration.

Continuous Monitoring

24/7 monitoring, threat detection and automated alerts for proactive response.

Role-Based Access

Granular permissions and role-based access controls for complete control.

You can sign with confidence.

RealSign combines enterprise-grade security, strong authentication and complete suitability—so you can focus on what matters most: moving your business forward.

RealSign in action, Embedded where work happens.

RealSign becomes
part of your process—
not a step outside of it.

No redirects.
No re-uploads.

Complete
audit visibility.

Faster outcomes.
Happier users.

RealSign is designed to integrate seamlessly into the systems your organisation already uses, allowing users to review and sign documents without interrupting their workflow.

USE CASE 1

FlowCentric Chain of Custody

RealSign is embedded directly into the FlowCentric workflow, capturing signatures and evidence at every handover.

-  **Package Ready**
Item is prepared for dispatch.
-  **Delivery Event**
Item is delivered or handed over.
-  **RealSign Embedded**
Sign within FlowCentric at the point of delivery.
-  **Date & Timestamp Captured**
Accurate time and date recorded.
-  **Chain of Custody Report**
Evidence is compiled automatically.
-  **Complete Audit Trail**
End-to-end traceability and tamper-evident record.

 Real-time signatures. Verified evidence.
Stronger compliance.

USE CASE 2

RealContract Contract Lifecycle Management

RealSign is embedded across the entire contract lifecycle, keeping agreements moving without leaving the platform.

-  **Create Contract**
Draft and prepare your agreement.
-  **Internal Approvals**
Route for review and approval.
-  **RealSign Embedded**
Sign within RealContract by authorised parties.
-  **Contract Executed**
Agreement is fully executed and complete.
-  **Stored in Repository**
Signed document and audit trail are stored securely.
-  **Lifecycle Management**
Track obligations, renewals and key dates.

 Faster execution. Centralised records.
Complete visibility.

Other Common Use Cases:

Procurement

- Supplier Agreements
- Purchase Orders
- Vendor Onboarding

Human Resources

- Employment Contracts
- Offer Letters
- Policy Acknowledgements

Sales

- Customer Agreements
- NDAs
- Quotes & Proposals

Finance

- Payment Authorisations
- Budget Sign-offs
- Internal Approvals

Operations

- Chain of Custody
- Compliance Forms
- Service Requests

Legal & Compliance

- Legal Documents
- Regulatory Filings
- Consent Forms

The power of a trusted signature, Embedded everywhere

RealSign brings secure, compliant and seamless signing into the applications and workflows your organisation already relies on.

**No switching. No friction.
Just signing that works.**

Developer-first

Modern APIs and SDKs make it easy to embed RealSign into any application or platform.

Secure by design

Enterprise-grade security, encryption, authentication and tamper evidence built in.

Built for compliance

Trusted digital signatures and audit trails that meet local and global regulatory requirements.

Fast to deploy

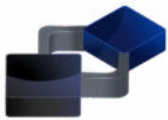

Flexible deployment options get you up and running—whether in the cloud or on-premise.

Better experiences

Keep users focused on their work with a native, branded signing experience they won't want to leave.
